You arrive at a subway station where something has gone wrong. Inside the Rift, light is your only weapon, but the Rift is a hive, and it learns how you fight.

1. Overview

A short, complete turn-based JRPG. You arrive at a subway station where the people inside have turned on each other. Who you are is left vague. You cross into the Rift, a metaphysical copy of the same place, and fight deMONs with skills built on the light spectrum. Two others join you. When the Rift is sealed, the survivors share a cigarette, and the ending reflects who made it out.

2. Design pillars

Theme	How it shows up
Light	Combat is built on the light spectrum. Some skills strike many times lightly, others strike once with force. Each party member owns a different part of the spectrum, and light is also the look of the world.
Comic	A comic noir style: bright ink on black, halftone texture, and a small set of accent colors. Dialogue and key moments are presented as comic panels.
Twist	The Rift is a hive that learns from the player. The skill you rely on most is the one it starts to resist, so strength becomes a weakness and the player must keep changing how they fight.

3. The experience

- **The station:** a short, atmospheric opening that sets the tone and plants the idea that light is what opened the Rift.
- **The Rift:** a tutorial fight, then your companions join and the party crosses a small number of rooms. Each room, the hive adapts a little more.
- **The boss:** the hive turns your habits against you. Players who have varied their skills are rewarded.
- **The aftermath:** a quiet closing scene that changes depending on how the fight went and who survived.

4. Scope

The goal is a complete, stable experience of around 10 to 15 minutes, built to be finished rather than to be big.

Included	Not included
A small party with a focused set of skills A few short encounters and one boss Turn-based combat with the hive adaptation system Dialogue and comic-style presentation One closing scene with variations	Large or open worlds Inventory, crafting and side systems Long or branching storylines Extra polish that risks the finish

5. Approach and technology

- Built in Godot and exported as a playable web build on itch.io.
- A stylized, low-detail presentation with a fixed camera, atmospheric fog and light, so the mood comes from design rather than heavy assets.
- If the 3D approach proves too costly, the same game continues as a fully 2D version. The core systems are built to work either way.
- The web build is tested early and regularly, since a game that does not run in the browser cannot be judged.

6. Plan

Phase	Focus
Foundation	Prove the web build and the visual approach, then lock the scope.
Core systems	Combat, skills and the hive adaptation system, playable from start to finish with placeholders.
Content	Rooms, enemies, boss, writing and the closing scene.
Polish	Comic presentation, audio and a full playthrough.
Delivery	Bug fixes only, final build, documentation and credits.

7. Risks

- Limited engine experience, web performance, scope, and making sure players notice the twist.
- These are handled with early testing, a clear cut list, and visible feedback whenever the hive adapts.
